

Free + Open Source

Hosted Service

fully-local
use devtools mcp
+ skills to populate
and use sightmaps

push sightmaps
to st-live Agent
leaves reasoning,
collaborates with
user via comments
Comments persist

Capture st-live
sessions for future
review, collaboration
with others
Hosted artifacts for
agent collab + external
review

Scenarios

Completely Local - better playwright, faster, with macros enabled by sightmaps. Small set of skills to guide sightmap use and maintenance. Local dev-tools

Minimum friction, maximum speed. No account required

Solo developer - Capture agent sessions, review + comment UI gives feedback loop with local agent. Optionally use st-live to create human-agent feedback loop.

Dev Team - Create hosted artifacts and captured sessions for review by teammates. Share live connections for real-time collaboration. And reviews + comments for async review and collaboration.

Managed Agents - Agents use live connections for implementing, captured sessions + artifacts for inter-agent collaboration and proof-of-work
